## Vocabulary Flash Cards

<p>The “then” part of a conditional statement written in if-then form</p> <p>If <u>you are in Houston</u>, then <u>you are in Texas</u>.</p> <p style="text-align: center;"> <span style="margin-right: 100px;">hypothesis, <math>p</math></span> <span>conclusion, <math>q</math></span> </p>	<p>A statement that contains the phrase “if and only if”</p> <p>Two lines intersect to form a right angle if and only if they are perpendicular lines.</p>
<p>An unproven statement that is based on observations</p> <p>Conjecture: The sum of any three consecutive integers is three times the second number.</p>	<p>A logical statement that has a hypothesis and a conclusion</p> <p>If <u>you are in Houston</u>, then <u>you are in Texas</u>.</p> <p style="text-align: center;"> <span style="margin-right: 100px;">hypothesis, <math>p</math></span> <span>conclusion, <math>q</math></span> </p>
<p>The statement formed by exchanging the hypothesis and conclusion of a conditional statement</p> <p>Statement: If you are a guitar player, then you are a musician.</p> <p>Converse: If you are a musician, then you are a guitar player.</p>	<p>The statement formed by negating both the hypothesis and conclusion of the converse of a conditional statement</p> <p>Statement: If you are a guitar player, then you are a musician.</p> <p>Contrapositive: If you are not a musician, then you are not a guitar player.</p>
<p>A process that uses facts, definitions, accepted properties, and the laws of logic to form a logical argument</p> <p>You use deductive reasoning to write geometric proofs.</p>	<p>A specific case for which a conjecture is false</p> <p>Conjecture: The sum of two numbers is always more than the greater number.</p> <p>Counterexample: <math>-2 + (-3) = -5</math>  <math>-5 \not&gt; -2</math></p>

## Vocabulary Flash Cards

<p><b>equivalent statements</b></p> <p><i>Chapter 2 (p. 67)</i></p>	<p><b>flowchart proof (flow proof)</b></p> <p><i>Chapter 2 (p. 106)</i></p>
<p><b>hypothesis</b></p> <p><i>Chapter 2 (p. 66)</i></p>	<p><b>if-then form</b></p> <p><i>Chapter 2 (p. 66)</i></p>
<p><b>inductive reasoning</b></p> <p><i>Chapter 2 (p. 76)</i></p>	<p><b>inverse</b></p> <p><i>Chapter 2 (p. 67)</i></p>
<p><b>line perpendicular to a plane</b></p> <p><i>Chapter 2 (p. 86)</i></p>	<p><b>negation</b></p> <p><i>Chapter 2 (p. 66)</i></p>

## Vocabulary Flash Cards

<p>A type of proof that uses boxes and arrows to show the flow of a logical argument</p>	<p>Two related conditional statements that are both true or both false</p> <p>A conditional statement and its contrapositive are equivalent statements</p>
<p>A conditional statement in the form “if <math>p</math>, then <math>q</math>”, where the “if” part contains the hypothesis and the “then” part contains the conclusion</p> <p>If you are in Houston, then you are in Texas.</p> <p style="text-align: center;"> <span style="margin-right: 100px;"> <math>\underbrace{\hspace{10em}}</math>                      hypothesis, <math>p</math> </span> <span> <math>\underbrace{\hspace{10em}}</math>                      conclusion, <math>q</math> </span> </p>	<p>The “if” part of a conditional statement written in if-then form</p> <p>If <math>\underbrace{\text{you are in Houston}}_{\text{hypothesis, } p}</math>, then <math>\underbrace{\text{you are in Texas.}}_{\text{conclusion, } q}</math></p>
<p>The statement formed by negating both the hypothesis and conclusion of a conditional statement</p> <p>Statement: If you are a guitar player, then you are a musician.</p> <p>Inverse: If you are not a guitar player, then you are not a musician.</p>	<p>A process that includes looking for patterns and making conjectures</p> <p>Given the number pattern 1, 5, 9, 13, ..., you can use inductive reasoning to determine that the next number in the pattern is 17.</p>
<p>The opposite of a statement</p> <p>If a statement is <math>p</math>, then the negation is “not <math>p</math>,” written <math>\sim p</math>.</p> <p>Statement: The ball is red.</p> <p>Negation: The ball is <i>not</i> red.</p>	<p>A line that intersects the plane in a point and is perpendicular to every line in the plane that intersects it at that point</p>  <p>Line <math>t</math> is perpendicular to plane <math>P</math>.</p>

## Vocabulary Flash Cards

<p><b>paragraph proof</b></p> <p><i>Chapter 2 (p. 108)</i></p>	<p><b>perpendicular lines</b></p> <p><i>Chapter 2 (p. 68)</i></p>
<p><b>proof</b></p> <p><i>Chapter 2 (p. 100)</i></p>	<p><b>theorem</b></p> <p><i>Chapter 2 (p. 101)</i></p>
<p><b>truth table</b></p> <p><i>Chapter 2 (p. 70)</i></p>	<p><b>truth value</b></p> <p><i>Chapter 2 (p. 70)</i></p>
<p><b>two column proof</b></p> <p><i>Chapter 2 (p. 100)</i></p>	

## Vocabulary Flash Cards

Two lines that intersect to form a right angle

A style of proof that presents the statements and reasons as sentences in a paragraph, using words to explain the logical flow of an argument

A statement that can be proven

Vertical angles are congruent.

A logical argument that uses deductive reasoning to show that a statement is true

A value that represents whether a statement is true (T) or false (F)

*See truth table.*

A table that shows the truth values for a hypothesis, conclusion, and a conditional statement

Conditional		
$p$	$q$	$p \rightarrow q$
T	T	T
T	F	F
F	T	T
F	F	T

A type of proof that has numbered statements and corresponding reasons that show an argument in a logical order
